

NEW PLE60 / 70 – Neugart E-series Servo-gearhead with Integrated Square Output Flange

Neugart is pleased to announce the addition to the E-series product line of a new unit with an integrated square output flange, the PLE60/70.

The PLE60/70, PLE80/90 and PLE120/115 units, not only incorporate the integrated square flange but also larger bearings with higher radial load carrying capabilities. These gearheads are ideally suited for applications with rack and pinion, timing belt linear drives, cam or others where an added radial load capacity at the output shaft is of advantage.

The E-series base models PLE40, PLE60, PLE80, PLE120, and PLE160 have no output flange; the output face features a centering pilot and drilled - tapped holes for mounting. This arrangement allows generally a more compact and more economical mounting of the motor gearhead combination to the driven machinery.
